A Brocode AI Insights publication

Arabic OCR Accuracy Benchmark — 7 Engines, 10,000 Documents

How seven enterprise OCR engines perform on UAE government and banking Arabic.

Inside this report

- 01 Benchmark setup
- 02 Field-level accuracy: ABBYY, Microsoft, Google, AWS, Brocode
- 03 Handwritten Arabic performance
- 04 TDRA-compliant on-prem appliance
- 05 Pre-contract free 500-document benchmark

Benchmark setup

This is a preview of the "Benchmark setup" section of the report. The final published version of this report contains in-depth analysis, benchmark data, reference architectures, and recommendations specific to enterprises operating in the UAE and the wider GCC. If you would like the full version before it is released, please request a copy from the Brocode AI team and we will share an embargoed draft under NDA. We can also arrange a 30-minute briefing with the engineer who authored this section. This preview is intentionally short so that the reader of the gated download can scan the structure of the full report. The body sections of the final publication run between 6 and 12 pages each, with a mix of prose, tables, and figures.

Field-level accuracy: ABBYY, Microsoft, Google, AWS, Brocode
