AI SOFTWARE DEVELOPMENT

Abu Dhabi · United Arab Emirates

A Brocode AI Insights publication

Model Optimisation Playbook — 4.2× Latency Reduction

TensorRT, quantisation, distillation, ONNX runtime — when to use what.

Inside this report

- 01 Pareto frontier methodology
- 02 Quantisation: INT8 / INT4 / FP4
- 03 Distillation playbook
- 04 Hardware targets: Jetson, Snapdragon, mobile, server
- 05 Public reproducer on GitHub

Pareto frontier methodology

This is a preview of the "Pareto frontier methodology" section of the report. The final published version of this report contains in-depth analysis, benchmark data, reference architectures, and recommendations specific to enterprises operating in the UAE and the wider GCC. If you would like the full version before it is released, please request a copy from the Brocode AI team and we will share an embargoed draft under NDA. We can also arrange a 30-minute briefing with the engineer who authored this section. This preview is intentionally short so that the reader of the gated download can scan the structure of the full report. The body sections of the final publication run between 6 and 12 pages each, with a mix of prose, tables, and figures.

Quantisation: INT8 / INT4 / FP4

This is a preview of the "Quantisation: INT8 / INT4 / FP4" section of the report. The final published version of this report contains in-depth analysis, benchmark data, reference architectures, and recommendations specific to enterprises operating in the UAE and the wider GCC. If you would like the full version before it is released, please request a copy from the Brocode AI team and we will share an embargoed draft under NDA. We can also arrange a 30-minute briefing with the engineer who authored this section. This preview is intentionally short so that the reader of the gated download can scan the structure of the full report. The body sections of the final publication run between 6 and 12 pages each, with a mix of prose, tables, and figures.

Distillation playbook

This is a preview of the "Distillation playbook" section of the report. The final published version of this report contains in-depth analysis, benchmark data, reference architectures, and recommendations specific to enterprises operating in the UAE and the wider GCC. If you would like the full version before it is released, please request a copy from the Brocode AI team and we will share an embargoed draft under NDA. We can also arrange a 30-minute briefing with the engineer who authored this section. This preview is intentionally short so that the reader of the gated download can scan the structure of the full report. The body sections of the final publication run between 6 and 12 pages each, with a mix of prose, tables, and figures.

Hardware targets: Jetson, Snapdragon, mobile, server

This is a preview of the "Hardware targets: Jetson, Snapdragon, mobile, server" section of the report. The final published version of this report contains in-depth analysis, benchmark data, reference architectures, and recommendations specific to enterprises operating in the UAE and the wider GCC.
