Abu Dhabi · United Arab Emirates

A Brocode AI Insights publication

Practitioner Pack — Q1 2026 Bundle

Three long-form guides for senior ML/AI practitioners.

Inside this report

- 01 Arabic NLP at production scale
- 02 RAG that survives the regulator
- 03 MLOps for sovereign-cloud deployments

Arabic NLP at production scale

This is a preview of the "Arabic NLP at production scale" section of the report. The final published version of this report contains in-depth analysis, benchmark data, reference architectures, and recommendations specific to enterprises operating in the UAE and the wider GCC. If you would like the full version before it is released, please request a copy from the Brocode AI team and we will share an embargoed draft under NDA. We can also arrange a 30-minute briefing with the engineer who authored this section. This preview is intentionally short so that the reader of the gated download can scan the structure of the full report. The body sections of the final publication run between 6 and 12 pages each, with a mix of prose, tables, and figures.

RAG that survives the regulator

This is a preview of the "RAG that survives the regulator" section of the report. The final published version of this report contains in-depth analysis, benchmark data, reference architectures, and recommendations specific to enterprises operating in the UAE and the wider GCC. If you would like the full version before it is released, please request a copy from the Brocode AI team and we will share an embargoed draft under NDA. We can also arrange a 30-minute briefing with the engineer who authored this section. This preview is intentionally short so that the reader of the gated download can scan the structure of the full report. The body sections of the final publication run between 6 and 12 pages each, with a mix of prose, tables, and figures.

MLOps for sovereign-cloud deployments

This is a preview of the "MLOps for sovereign-cloud deployments" section of the report. The final published version of this report contains in-depth analysis, benchmark data, reference architectures, and recommendations specific to enterprises operating in the UAE and the wider GCC. If you would like the full version before it is released, please request a copy from the Brocode AI team and we will share an embargoed draft under NDA. We can also arrange a 30-minute briefing with the engineer who authored this section. This preview is intentionally short so that the reader of the gated download can scan the structure of the full report. The body sections of the final publication run between 6 and 12 pages each, with a mix of prose, tables, and figures.

Talk to our team

If this report sparked questions, we are happy to walk you through the underlying analysis, share the full benchmark dataset under NDA, or design a tailored architecture review for your specific environment. Reach us in whichever channel works.
