A Brocode AI Insights publication

2026 Reference Architecture Pack

Pinned versions of the stack we run in production today.

Inside this report

- 01 Core ML: Python 3.11, PyTorch 2.4, vLLM 0.6, Ray 2.30
 - 02 Platform: K8s 1.30, Terraform 1.9, Argo CD
 - 03 Data: dbt, Airflow / Dagster, Iceberg, pgvector
 - 04 Observability: MLflow 2.16, Arize, OpenLineage
 - 05 Guardrails: NeMo Guardrails, Lakera Guard
 - 06 Why we picked each (and what we rejected)
- brocode.ae · hello@brocode.ae · +971 50 761 2213

Core ML: Python 3.11, PyTorch 2.4, vLLM 0.6, Ray 2.30

This is a preview of the "Core ML: Python 3.11, PyTorch 2.4, vLLM 0.6, Ray 2.30" section of the report. The final published version of this report contains in-depth analysis, benchmark data, reference architectures, and recommendations specific to enterprises operating in the UAE and the wider GCC. If you would like the full version before it is released, please request a copy from the Brocode AI team and we will share an embargoed draft under NDA. We can also arrange a 30-minute briefing with the engineer who authored this section. This preview is intentionally short so that the reader of the gated download can scan the structure of the full report. The body sections of the final publication run between 6 and 12 pages each, with a mix of prose, tables, and figures.

Platform: K8s 1.30, Terraform 1.9, Argo CD

This is a preview of the "Platform: K8s 1.30, Terraform 1.9, Argo CD" section of the report. The final published version of this report contains in-depth analysis, benchmark data, reference architectures, and recommendations specific to enterprises operating in the UAE and the wider GCC. If you would like the full version before it is released, please request a copy from the Brocode AI team and we will share an embargoed draft under NDA. We can also arrange a 30-minute briefing with the engineer who authored this section. This preview is intentionally short so that the reader of the gated download can scan the structure of the full report. The body sections of the final publication run between 6 and 12 pages each, with a mix of prose, tables, and figures.

Data: dbt, Airflow / Dagster, Iceberg, pgvector

This is a preview of the "Data: dbt, Airflow / Dagster, Iceberg, pgvector" section of the report. The final published version of this report contains in-depth analysis, benchmark data, reference architectures, and recommendations specific to enterprises operating in the UAE and the wider GCC. If you would like the full version before it is released, please request a copy from the Brocode AI team and we will share an embargoed draft under NDA. We can also arrange a 30-minute briefing with the engineer who authored this section. This preview is intentionally short so that the reader of the gated download can scan the structure of the full report. The body sections of the final publication run between 6 and 12 pages each, with a mix of prose, tables, and figures.

Observability: MLflow 2.16, Arize, OpenLineage

This is a preview of the "Observability: MLflow 2.16, Arize, OpenLineage" section of the report. The final published version of this report contains in-depth analysis, benchmark data, reference architectures, and recommendations specific to enterprises operating in the UAE and the wider GCC. If you would like the full version before it is released, please request a copy from the Brocode AI team and we will share an embargoed draft under NDA. We can also arrange a 30-minute briefing with the engineer who authored this section. This preview is intentionally short so that the reader of the gated download can scan the structure of the full report. The body sections of the final publication run between 6 and 12 pages each, with a mix of prose, tables, and figures.

Guardrails: NeMo Guardrails, Lakera Guard

This is a preview of the "Guardrails: NeMo Guardrails, Lakera Guard" section of the report. The final published version of this report contains in-depth analysis, benchmark data, reference architectures, and recommendations specific to enterprises operating in the UAE and the wider GCC. If you would like the full version before it is released, please request a copy from the Brocode AI team and we will share an embargoed draft under NDA. We can also arrange a 30-minute briefing with the engineer who authored this section. This preview is intentionally short so that the reader of the gated download can scan the structure of the full report. The body sections of the final publication run between 6 and 12 pages each, with a mix of prose, tables, and figures.

Why we picked each (and what we rejected)

This is a preview of the "Why we picked each (and what we rejected)" section of the report. The final published version of this report contains in-depth analysis, benchmark data, reference architectures, and recommendations specific to enterprises operating in the UAE and the wider GCC. If you would like the full version before it is released, please request a copy from the Brocode AI team and we will share an embargoed draft under NDA. We can also arrange a 30-minute briefing with the engineer who authored this section. This preview is intentionally short so that the reader of the gated download can scan the structure of the full report. The body sections of the final publication run between 6 and 12 pages each, with a mix of prose, tables, and figures.

Talk to our team

If this report sparked questions, we are happy to walk you through the underlying analysis, share the full benchmark dataset under NDA, or design a tailored architecture review for your specific environment. Reach us in whichever channel works.
